# **After-Sales Notice**

We cordially ask that in order to preserve the useful life of the PECRON power stations in the LFP models, it is recommended that their storage be done in a dry, ventilated environment and at room temperature. Avoid placing the product near water sources. For long-term storage, it is recommended to discharge the battery to 30% and then charge it to 60% every three months. By following these steps we are ensuring exceptional performance.
